

Certificate of Course Completion

John Ullyses Doniego

has successfully achieved student level credential for completing the Industrial IoT and Control Systems in Energy course.

The student was able to proficiently:

- Describe types of process automation, IACS, and SCADA architectures and components.
- Explain the importance of safety measures and regulatory compliance in industrial settings.
- Implement high availability networking solutions for Operational Technologies (OT).
- Implement time synchronization protocols in IACS networks.
- Explain how the Smart Grid adds value to utilities generation and delivery.
- Explain how energy system components, architectures, and standards guide the development of smart grid networks.
